

HR Analytics Dashboard

Employee Attrition, Workforce and Salary Analysis

Internship Project Report

This report analyzes the supplied HR Employee Attrition dataset and presents workforce, attrition, overtime, department, job-role and salary insights.

1. Executive Summary

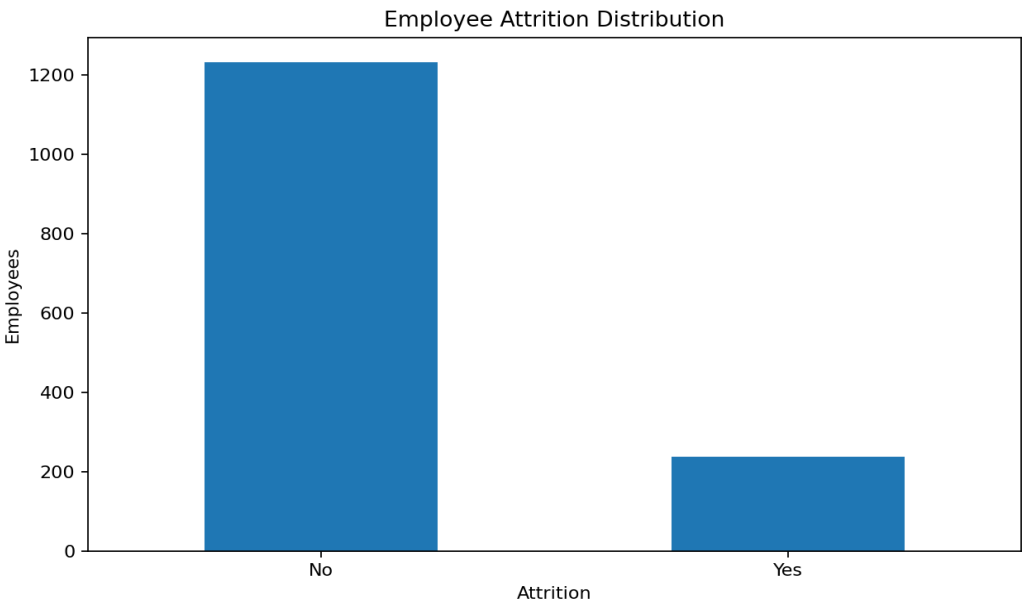

The dataset contains 1,470 employee records and 35 fields. There are 237 employees with Attrition = Yes, resulting in an overall attrition rate of 16.12%. Average employee age is 36.9 years, average monthly income is \$6,503, and average tenure is 7.0 years.

2. KPI Summary

KPI	Value
Total Employees	1,470
Attrition Count	237
Attrition Rate	16.12%
Average Age	36.9 years
Average Monthly Income	\$6,503
Average Years at Company	7.0

3. Attrition Analysis

Attrition is the primary outcome variable. The analysis compares attrition across overtime status, departments and job roles to identify groups that may require retention attention.

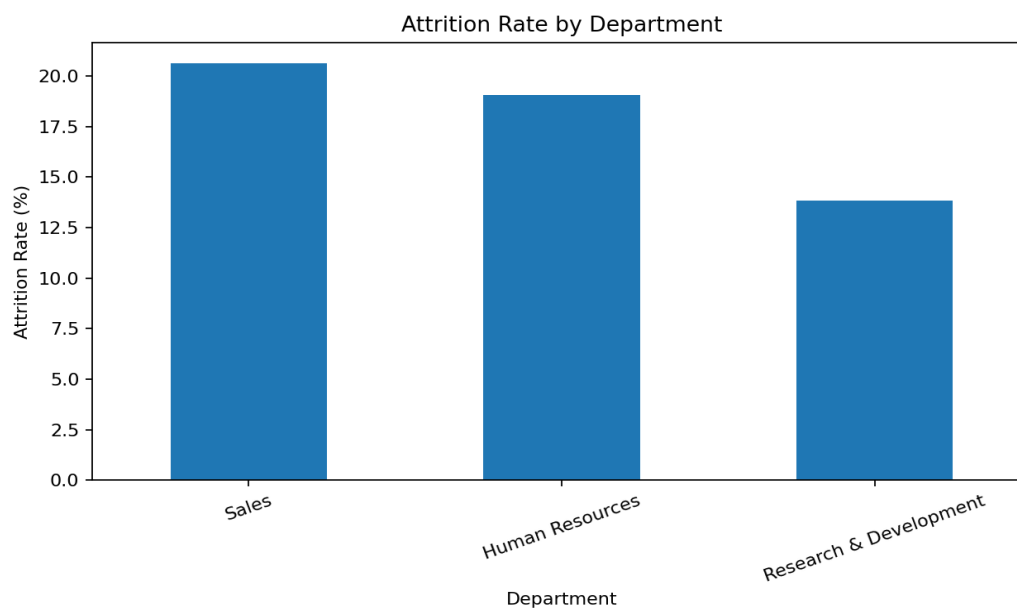

4. Overtime Analysis

No: attrition rate 10.44%.

Yes: attrition rate 30.53%.

5. Department Analysis

Department	Employees	Attrition	Rate
Sales	446.0	92.0	20.63%
Human Resources	63.0	12.0	19.05%
Research & Development	961.0	133.0	13.84%

6. Job Role Analysis

Job Role	Employees	Attrition	Rate
Sales Representative	83.0	33.0	39.76%
Laboratory Technician	259.0	62.0	23.94%
Human Resources	52.0	12.0	23.08%
Sales Executive	326.0	57.0	17.48%
Research Scientist	292.0	47.0	16.10%
Manufacturing Director	145.0	10.0	6.90%
Healthcare Representative	131.0	9.0	6.87%
Manager	102.0	5.0	4.90%
Research Director	80.0	2.0	2.50%

7. Business Recommendations

- Review workload, scheduling and employee experience for high-overtime groups.
- Prioritize retention interventions in departments and job roles with elevated attrition rates.
- Use early-tenure onboarding, manager check-ins and career-development conversations to improve retention.
- Combine satisfaction, work-life balance, distance from home and overtime indicators when identifying at-risk groups.
- Use salary, job level, performance and promotion history together rather than relying on salary alone.

- Monitor attrition rate and supporting KPIs regularly through the Power BI dashboard.

8. Data Limitation

The supplied dataset does not contain an explicit attendance field. Therefore, an attendance analysis cannot be truthfully produced from this dataset alone. The dashboard should not fabricate attendance KPIs.

9. Conclusion

The HR analytics solution converts employee-level data into actionable workforce insights. The Power BI dashboard can help HR teams monitor attrition, identify high-risk segments and investigate relationships among overtime, job role, department, compensation and employee experience.
